              Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA
COMMENT   On May 6, 2000 this sequence version replaced gi:7690187.
              -----Genome Center
              Center: Joint Genome Institute
              Center code: JGI
              Web site: http://www.jgi.doe.gov

              Project Information
              Center Project Name: 26813, R31543
              Center clone name: LLNLR_277D11

              Summary Statistics
              Consensus quality: 35124 bases at least Q40
              Consensus quality: 35398 bases at least Q30
              Consensus quality: 35534 bases at least Q20
              Estimated insert size: 32650; agarose-fp estimation
              Estimated insert size: 35748; sum-of-contigs estimation
              Quality coverage: 10.55 in Q20 bases; agarose-fp estimation
              Quality coverage: 9.64 in Q20 bases; sum-of-contigs estimation.
              NOTE: This is a 'working draft' sequence. It currently
              * consists of 3 contigs. Gaps between the contigs
              * are represented as runs of N. The order of the pieces
              * is believed to be correct as given, however the sizes
              * of the gaps between them are based on estimates that have
              * provided by the submitter.
              * This sequence will be replaced
              * by the finished sequence as soon as it is available and
              * the accession number will be preserved.
              *   1   18613: contig of 18613 bp in length
              * 18614   18713: gap of unknown length
              * 18714   19277: contig of 564 bp in length
              * 19278   19377: gap of unknown length
              * 19378   35848: contig of 16471 bp in length.

  TITLE   Direct Submission
  JOURNAL   Submitted (15-DEC-1999) MIPS, Am Klopferspitz 18a, D-82152
             Martinsried, GERMANY
  COMMENT   Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
             Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
             sequenced by BMFZ (Biomedical Research Center at the Charite,
             Berlin/Germany) within the cDNA sequencing consortium of the German
             Genome Project.
             This clone (DKFZp434C196) is available at the RZPD in Berlin.
             Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
             Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
             information about the clone and the sequencing project is available
             at http://www.mips.biochem.mpg.de/proj/cDNA/.

JOURNAL     Submitted (07-OCT-1999) Production Sequencing Facility, DOE Joint
            Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA
COMMENT     On May 6, 2000 this sequence version replaced gi:7650187.
            -----Genome Center
            Center: Joint Genome Institute
            Center Code: JGI
            Web site: http://www.jgi.doe.gov
            -----
            Project Information
            Center Project Name: 26813, R31543
            Center clone name: LLNLR-277D11
            -----
            Summary Statistics
            Consensus quality: 35124 bases at least Q40
            Consensus quality: 35398 bases at least Q30
            Consensus quality: 35534 bases at least Q20
            Estimated Insert size: 32650; agarose-fp estimation
            Estimated Insert size: 35748; sum-of-contigs estimation
            Quality coverage:  9.64 in Q20 bases; agarose-fp estimation
            Quality coverage: 10.55 in Q20 bases; sum-of-contigs estimation.
            NOTE: This is a 'working draft' sequence. It currently
            consists of 3 contigs. Gaps between the contigs
            are represented as runs of N. The order of the pieces
            is believed to be correct as given, however the sizes
            of the gaps between them are based on estimates that have
            provided by the submittor.
            This sequence will be replaced
            by the finished sequence as soon as it is available and
            the accession number will be preserved.
          *         1  18613: contig of 18613 bp in length

TITLE       Direct Submission
JOURNAL     Submitted (24-OCT-2001) DOE Joint Genome Institute and Stanford
            Human Genome Center and Los Alamos National Laboratory.
COMMENT     On Oct 24, 2001 this sequence version replaced gi:15144408.
            Draft Sequence Produced by DOE Joint Genome Institute
            www.jgi.doe.gov
            Finishing Completed at Stanford Human Genome Center
            www-shgc.stanford.edu
            Quality: Phrap Quality >=40 98.4% of Sequence;
            Estimated Total Number of Errors is 0.
            NOTE: This sequence is not the entire sequence of the clone. It
            is sequence generated to span the gap between AC005390 and
            AC011553. The overlap with AC005390 is 1172bp and the overlap with
            AC011553 is 1062bp. The sequence was finished by the Stanford
            Human Genome Center and Los Alamos National Laboratory.

            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing program: plasmid; L08752; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Sequencing vector: plasmid; L08752; 100% of reads
            Consensus quality: 181067 bases at least Q40
            Consensus quality: 179028 bases at least Q40
            Consensus quality: 182219 bases at least Q30
            Insert size: 183390; sum-of-contigs
            Insert size: 183611; 2.2% error; agarose-fp
            Insert size: 192611; 2.2% error; agarose-fp
            Quality coverage: 4.32x in Q20 bases; sum-of-contigs Quality
            coverage: 4.20x in Q20 bases; agarose-fp
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

  TITLE   Direct Submission
  JOURNAL   Submitted (15-JUN-2001) Sanger Centre, Hinxton, Cambridgeshire,
          CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
          requests: clonerequest@sanger.ac.uk
COMMENT   On Jun 17, 2001 this sequence version replaced gi:13184286.
          During sequence assembly data is compared from overlapping clones.
          Where differences are found these are annotated as variations
          together with a note of the overlapping clone name. Note that the
          variation annotation may not be found in the sequence submission
          corresponding to the overlapping clone, as we submit sequences with
          only a small overlap as described above.
          This sequence was finished as follows unless otherwise noted: all
          regions were either double-stranded or sequenced with an alternate
          chemistry or covered by high quality data (i.e., phred quality >=
          30); an attempt was made to resolve all sequencing problems, such
          as compressions and repeats; all regions were covered by at least
          one plasmid subclone or more than one M13 subclone; and the
          assembly was confirmed by restriction digest. The following
          abbreviations are used to associate primary accession numbers given
          in the feature table with their source databases: Em:, EMBL; Sw:,
          SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
          database can be found at
          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
          was generated from part of bacterial clone contigs of human
          chromosome 13. Further information can be found at
          http://www.sanger.ac.uk/HGP/Chr13
          Mapping Group.
          RP11-310D8 is from the library RPCI-11.2 constructed by the group
          of Pieter de Jong. For further details see
          http://www.chori.org/bacpac/home.htm
          VECTOR: pBACe3.6
          This sequence is the entire insert of clone RP11-310D8 The true
          left end of clone RP11-75F3 is at 53050 in this sequence. The true
          right end of clone RP11-450H6 is at 21465 in this sequence.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (25-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 26, 2001 this sequence version replaced gi:15590915.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 13, constructed by the Sanger Centre Chromosome 13
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr13
            RP11-12G12 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-12G12 It may be shorter because we sequence overlapping
            sections only once, except for a short overlap.
            The true left end of clone RP11-340C20 is at 151763 in this
            sequence. The true right end of clone RP11-134O15 is at 2000 in
            this sequence.

                Contact: sequence_submissions@genome.wi.mit.edu
            ---------------------------------------
                    Project Information
                Center project name: L19633
                Center clone name: 142_O_4
            ---------------------------------------
            * NOTE: This record contains 55 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *

            -----------------------------------------------------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 29 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1             1529: contig of 1529 bp in length
            *     1530   1629: gap of 100 bp
            *     1630   2793: contig of 1164 bp in length
            *     2794   2893: gap of 100 bp
            *     2894   4504: contig of 1611 bp in length
            *     4505   4604: gap of 100 bp

JOURNAL   Submitted (17-SEP-2001) Human Genome Sequencing Center, Department
          of Molecular and Human Genetics, Baylor College of Medicine, One
          Baylor Plaza, Houston, TX 77030, USA
COMMENT   On Dec 20, 2001 this sequence version replaced gi:15627177.
          --------------- Genome Center
             Center: Baylor College of Medicine
             Center code: BCM
             Web site: http://www.hgsc.bcm.tmc.edu/
             Contact: hgsc-help@bcm.tmc.edu
          --------------- Project Information
             Center project name: GCRP
             Center clone name: CH230-8D4
          --------------- Summary Statistics
             Assembly program: Phrap; version 0.990329First call to
          findPhrapList*
             Consensus quality: 53080 bases at least Q40
             Consensus quality: 57822 bases at least Q30
             Consensus quality: 61489 bases at least Q20
             Estimated insert size: 40280; sum-of-contigs estimation
             Quality coverage: 0x in Q20 bases; agarose-fp estimation
             Quality coverage: 0.4x in Q20 bases; sum-of-contigs estimation
          ---------------
          * NOTE: Estimated insert size may differ from sequence length
          *    (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          *    consists of 34 contigs. The true order of the pieces
          *    is not known and their order in this sequence record is
          *    arbitrary. Gaps between the contigs are represented as
          *    runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *     1    3299: contig of 3299 bp in length
          *  3300    3399: gap of unknown length
          *  3400    5449: contig of 2050 bp in length
          *  5450    5549: gap of unknown length
          *  5550    7088: contig of 1539 bp in length
          *  7089    7188: gap of unknown length
          *  7189    9405: contig of 2217 bp in length
          *  9406    9505: gap of unknown length
          *  9506   12651: contig of 3146 bp in length
          * 12652   12751: gap of unknown length
          * 12752   15134: contig of 2383 bp in length
          * 15135   15234: gap of unknown length
          * 15235   17420: contig of 2186 bp in length
          * 17421   17520: gap of unknown length
          * 17521   20217: contig of 2697 bp in length
          * 20218   20317: gap of unknown length
          * 20318   22134: contig of 1817 bp in length
          * 22135   22234: gap of unknown length
          * 22235   23804: contig of 1570 bp in length
          * 23805   23904: gap of unknown length
          * 23905   25367: contig of 1463 bp in length
          * 25368   25467: gap of unknown length
          * 25468   27472: contig of 2005 bp in length
          * 27473   27572: gap of unknown length
          * 27573   29410: contig of 1838 bp in length
          * 29411   29510: gap of unknown length
          * 29511   30798: contig of 1288 bp in length
          * 30799   30898: gap of unknown length
          * 30899   32015: contig of 1117 bp in length
          * 32016   32115: gap of unknown length
          * 32116   33224: contig of 1109 bp in length

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (08-DEC-1998) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 30, 1998 this sequence version replaced gi:3646106.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence is the entire insert of clone 625H18. The true right
            end of clone 498I24 (AL031057) is at 51918 in this sequence.
            This sequence has been finished according to sequence map criteria
            as follows. An attempt is made to resolve all sequencing problems,
            such as compressions and repeats, but not necessarily within known
            annotated human repeat sequence elements (e.g. Alu). Where the
            sequence is ambiguous, there is an annotation using the 'unsure'
            feature key.
            This sequence was generated from part of bacterial clone contigs of
            human chromosome 6, constructed by the Sanger Centre Chromosome 6
            Mapping Group. Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            625H18 is from the library RPCI14 constructed at the Roswell Park
            Cancer Institute by the group of Pieter de Jong. For further
            details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2.

COMMENT   On Dec 20, 2001 this sequence version replaced gi:16930877.
          ------- Genome Center
          Center: Baylor College of Medicine
          Center code: BCM
          Web site: http://www.hgsc.bcm.tmc.edu/
          Contact: hgsc-help@bcm.tmc.edu
          ------- Project Information
          Center project name: GIZO
          Center clone name: CH230-221D3
          ------- Summary Statistics
          Assembly program: Phrap; version 0.990329First call to
          findPhrapList
          Consensus quality: 131300 bases at least Q40
          Consensus quality: 138970 bases at least Q30
          Consensus quality: 145929 bases at least Q20
          Estimated insert size: 130110; sum-of-contigs estimation
          Quality coverage: 0x in Q20 bases; agarose-fp estimation
          Quality coverage: 2x in Q20 bases; sum-of-contigs estimation
          --------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE:This is a 'working draft' sequence. It currently
          * consists of 84 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *            1

  AUTHORS   Worley,K.C.
  TITLE     Direct Submission
  JOURNAL   Submitted (11-OCT-2001) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Dec 20, 2001 this sequence version replaced gi:17064510.
            ----------------------- Genome Center
            Center: Baylor College of Medicine
            Center code: BCM
            Web site: http://www.hgsc.bcm.tmc.edu/
            Contact: hgsc-help@bcm.tmc.edu
            ----------------------- Project Information
            Center project name: GIFA
            Center clone name: CH230-138P16
            ----------------------- Summary Statistics
            Assembly program: Phrap; version 0.990329First call to
            findPhrapList
            Consensus quality: 162156 bases at least Q40
            Consensus quality: 169369 bases at least Q30
            Consensus quality: 175407 bases at least Q20
            Estimated insert size: 170489; sum-of-contigs estimation
            Quality coverage: 0x in Q20 bases; agarose-fp estimation
            Quality coverage: 2.6x in Q20 bases; sum-of-contigs estimation
            ----------------------
            * NOTE: Estimated insert size may differ from sequence length
            *       (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            *  consists of 54 contigs. The true order of the pieces
            *  is not known and their order in this sequence record is
            *  arbitrary. Gaps between the contigs are represented as
            *  runs of N, but the exact sizes of the gaps are unknown.
            *  This record will be updated with the finished sequence
            *  as soon as it is available and the accession number will
            *  be preserved.
            *
            *        1: 8480: contig of 8480 bp in length
            *     8481    8580: gap of unknown length
            *     8581   18958: contig of 10378 bp in length
            *    18959   19058: gap of unknown length
            *    19059   27975: contig of 8917 bp in length
            *    27976   28075: gap of unknown length
            *    28076   34070: contig of 5995 bp in length
            *    34071   34170: gap of unknown length
            *    34171   39835: contig of 5665 bp in length
            *    39836   39935: gap of unknown length
            *    39936   49241: contig of 9306 bp in length
            *    49242   49341: gap of unknown length

SUMMARIES

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

            Consensus quality: 172472 bases at least Q40
            Consensus quality: 174610 bases at least Q30
            Consensus quality: 175032 bases at least Q20
            Estimated insert size: 190110; agarose-fp estimation
            Estimated insert size: 175199; sum-of-contigs estimation
            Quality coverage: 10.66 in Q20 bases; agarose-fp estimation
            Quality coverage: 11.57 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submitter.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *   1   22409: contig of 22409 bp in length
            *   22410   2250: gap of unknown length
            *   2250   3195: contig of 9445 bp in length

              Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
              Center project name: GBEK
              Center clone name: CH230-5E19
            -------------- Summary Statistics
              Quality coverage: 0.4x in Q20 bases; sum-of-contigs estimation
              Quality coverage: 0x in Q20 bases; agarose-fp estimation
              Estimated insert size: 34130; sum-of-contigs estimation
              Quality coverage: 66189 bases at least Q20
              Consensus quality: 60967 bases at least Q30
              Consensus quality: 51851 bases at least Q40
            Assembly program: Phrap; version 0.990329First call to
            findPhrapList
            * NOTE: Estimated insert size may differ from sequence length
            * (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE:This is a 'working draft' sequence. It currently
            * consists of 52 contigs.The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *   1   1005: contig of 1005 bp in length
            *   1006   1105: gap of unknown length
            *   1106   3795: contig of 2690 bp in length
            *   3796   3895: gap of unknown length
            *   3896   6097: contig of 2202 bp in length
            *   6098   6197: gap of unknown length
            *   6198   8292: contig of 2095 bp in length
            *   8293   8392: gap of unknown length
            *   8393   10938: contig of 2546 bp in length
            *   10939   11038: gap of unknown length
            *   11039   14624: contig of 3586 bp in length
            *   14625   14724: gap of unknown length
            *   14725   16339: contig of 1615 bp in length
            *   16340   16439: gap of unknown length
            *   16440   17745: contig of 1306 bp in length
            *   17746   17845: gap of unknown length
            *   17846   20378: contig of 2533 bp in length
            *   20379   20478: gap of unknown length
            *   20479   22174: contig of 1696 bp in length

            Quality coverage: 5.93 in Q20 bases; agarose-fp estimation
            Quality coverage: 4.94 in Q20 bases; sum-of-contigs estimation.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 20 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *

COMMENT     On Nov 27, 2001 this sequence version replaced gi:13027330.
            NOTE: It currently consists of 1 contigs. Gaps between the contigs
            are represented as runs of N. The order of the pieces is believed
            to be correct as given, however the sizes of the gaps between them
            are based on estimates that have provided by the submitter. This
            sequence will be replaced by the finished sequence as soon as it is
            available and the accession number will be preserved.
          * NOTE: This is a 'working draft' sequence.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.

COMMENT     --------- Genome Center
            Center: Washington University Genome Sequencing Center
            Center code: WUGSC
            Web site: http://genome.wustl.edu/gsc
            Contact: sapiens@watson.wustl.edu
            --------- Summary Statistics
            Center project name: H_RG276003
            ---------
            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded or sequenced with an alternate
            chemistry; an attempt was made to resolve all sequencing problems,
            such as compressions and repeats; all regions were covered by
            sequence from more than one subclone; and the assembly was
            confirmed by restriction digest.

            MAPPING INFORMATION:
            The sequence of this clone was established as part of a mapping and
            sequencing collaboration between the NHGRI Chromosome 7 Mapping
            Project (Eric D. Green, Director), John D. McPherson in the
            Department of Genetics (Washington University), and the Washington
            University Genome Sequencing Center.  For additional information
            about the map position of this sequence, see
            http://www.nhgri.nih.gov/DIR/GTB/CHR7/, or see http://genome.wustl.edu/gsc
            mailto:egreen@nhgri.nih.gov , or send

            SOURCE INFORMATION:
            Clone CTA-27603 is from a release of the human BAC library
            CITB-HS-A.  The library contains cloned DNA from human sperm.  See:
            Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J.
            Kim et al., Genomics 34:213-8 (1996).  The clone is available from
            Research Genetics, Inc. (http://www.resgen.com).
            VECTOR: pBeloBAC11
            Selection: chloramphenicol

            NEIGHBORING SEQUENCE INFORMATION:
            This clone contains STS SHGC-54619 (NID:g27344441).

            This clone contains STS (NID:g ).

            The actual start of this clone is at base position 112261 of CTA-27603;
            actual end is at base position 112261 of CTA-27603.

            This clone contains STS SHGC-54619 (NID:g27344441).

            ------------------------------------------
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 4 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *      1    1194: contig of 1194 bp in length
          *   1195    1294: gap of unknown length
          *   1295    2762: contig of 1468 bp in length
          *   2763    2862: gap of unknown length
          *   2863   70873: contig of 68011 bp in length
          *  70874   70973: gap of unknown length
          *  70974  196130: contig of 125157 bp in length.

            *
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 23 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

LOCUS       HS217P22              134550 bp    DNA      linear   PRI 23-NOV-1999
DEFINITION  HS217P22/c
            Human DNA sequence from clone 217P22 on chromosome 6p21.1-21.31.
            Contains part of a novel Dynein heavy chain family protein gene and
            a pseudogene similar to mouse MIDA1. Contains an EST, an STS and
            GSSs, complete sequence.
ACCESSION   AL035555
VERSION     AL035555.10  GI:4581305

  AUTHORS   Blakey,S.
  TITLE     Direct Submission
  JOURNAL   Submitted (15-APR-1999) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Apr 12, 1999 this sequence version replaced gi:4490837.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence is the entire insert of clone 217P22. This sequence
            has been finished according to sequence map criteria as follows. An
            attempt is made to resolve all sequencing problems, such as
            compressions and repeats, but not necessarily within known
            annotated human repeat sequence elements (e.g. Alu). Where the
            sequence is ambiguous, there is an annotation using the 'unsure'
            feature key.
            This sequence was generated from part of bacterial clone contigs of
            human chromosome 6, constructed by the Sanger Centre Chromosome 6
            Mapping Group. Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            217P22 is from the library RPCI1 constructed at the Roswell Park
            Cancer Institute by the group of Pieter de Jong. For further
            details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2.

            Contact: nisc_mouse@nhgri.nih.gov
            -------------- Project Information --------------
            Center project name: yn
            Center clone name: 255016
            -------------- Summary Statistics --------------
            Sequencing vector: plasmid; n/a; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 169396 bases at least Q40
            Consensus quality: 176085 bases at least Q30
            Consensus quality: 180318 bases at least Q20
            Insert size: 173000; agarose-fp
            Insert size: 228000; pulse-field-gel
            Insert size: 189242; sum-of-contigs
            Quality coverage: 6.87x in Q20 bases; agarose-fp
            Quality coverage: 5.21x in Q20 bases; pulse-field-gel
            Quality coverage: 6.28x in Q20 bases; sum-of-contigs
            ------------------------------------------------
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 23 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *
          *      1      2200: contig of 2200 bp in length
          *   2201      4687: gap of unknown length
          *   4688      7122: contig of 2487 bp in length
          *   7123     11237: gap of unknown length
          *  11238     14636: contig of 2435 bp in length
          *  14637     18498: gap of unknown length
          *                   contig of 4415 bp in length
          *                   gap of unknown length
          *                   contig of 3399 bp in length

　　　　Berkeley, CA 94720, USA

COMMENT　Sequence submitted by:
　　　　Berkeley Drosophila Genome Project
　　　　Lawrence Berkeley National Laboratory
　　　　Berkeley, CA 94720
　　　　This clone was sequenced as part of a high-throughput process to
　　　　sequence clones from Drosophila Gene Collection 1 (Rubin et al.,
　　　　Science 2000). The sequence has been subjected to integrity checks
　　　　for sequence accuracy, presence of a polyA tail and contiguity
　　　　within 100 kb in the genome. Thus we believe the sequence to
　　　　reflect accurately this particular cDNA clone. However, there are
　　　　artifacts associated with the generation of cDNA clones that may
　　　　have not been detected in our initial analyses such as internal
　　　　priming from contaminating genomic DNA, retained introns
　　　　due to reverse transcription of unspliced precursor RNAs, and
　　　　reverse transcriptase errors that result in single base changes.
　　　　For further information about this sequence, including its location
　　　　and relationship to other sequences, please visit our Web site
　　　　(http://fruitfly.berkeley.edu) or send email to
　　　　cdna@fruitfly.berkeley.edu.

TITLE　　Direct Submission
JOURNAL　Submitted (02-FEB-1998) European Schizosaccharomyces genome
　　　　sequencing project, Sanger Centre, The Wellcome Trust Genome
　　　　Campus, Hinxton, Cambridge CB10 1SA, E-mail: barrell@sanger.ac.uk
　　　　and QIAGEN GmbH, Max-Volmer-Str 4, D-40724 Hilden, Germany
COMMENT　On Nov 4, 1999 this sequence version replaced gi:2276349.
　　　　Notes:
　　　　Details of yeast sequencing at the Sanger Centre are available on
　　　　the World Wide Web.
　　　　(URL, http://www.sanger.ac.uk/Projects/S_pombe/)
　　　　During 1995 to 1996 about 80% of S. pombe chromosome 1 was
　　　　sequenced by the Sanger Centre. The sequencing of the S. pombe
　　　　genome is now being continued with funding from The European
　　　　Commission. Fourteen European sequencing laboratories, including
　　　　the Sanger Centre, are participating in the project.
　　　　Protein coding regions (CDS) have been predicted with the help of
　　　　computer analysis using the Genefinder program in PomBase (an ACEDB
　　　　database) with additional predictions for the branch-acceptor sites
　　　　supplied by the program Sp3splice. CAUTION: It is possible that for
　　　　any individual CDS we may have underestimated or overestimated the
　　　　number of introns/exons or we may not have chosen the correct
　　　　splice donor/acceptor sites.
　　　　CDS are numbered using the following system eg SPBC25H2.01c (S.
　　　　pombe), B (chromosome 2), c25H2 (cosmid name), .01 (first CDS), c
　　　　(complementary strand).
　　　　The more significant matches with motifs in the PROSITE database
　　　　are also included but some of these may be fortuitous.
　　　　The length in codons is given for each CDS.
　　　　IMPORTANT: This sequence MAY NOT be the entire insert of the
　　　　sequenced clone. It may be shorter because we only sequence
　　　　overlapping sections once, or longer, because we arrange for a
　　　　small overlap between neighbouring submissions.
　　　　Cosmid c30D10 does not apply.

            -Project Information
              Center project name: HANK
              Center clone name: RP11-488M12
            ----------------------------------------------------------
            -Summary Statistics
              Sequencing vector: M13; L08821
              Chemistry: Dye-primer BoIdpy: 18% of reads
              Chemistry: Dye-terminator Big Dye: 82% of reads
              Assembly program: Phrap; version 0.990329First call to
            findPhraplist
              Consensus quality: 140075 bases at least Q40
              Consensus quality: 148512 bases at least Q30
              Consensus quality: 153337 bases at least Q20
              Estimated insert size: 149429; sum-of-contigs estimation
              Quality coverage: 0x in Q20 bases; agarose-fp estimation
              Quality coverage: 4.5x in Q20 bases; sum-of-contigs estimation
            *
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 16 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *
            *        1    44630: contig of 44630 bp in length

TITLE       Direct Submission
JOURNAL     Submitted (28-FEB-2000) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Mar 14, 2000 this sequence version replaced gi:7229935.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html

            Center clone name: 131_O_20

* NOTE: This is a 'working draft' sequence. It currently
* consists of 49 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
*        1  1156: contig of 1156 bp in length
*     1157  1256: gap of 100 bp
*     1257  2440: contig of 1184 bp in length
*     2441  2540: gap of 100 bp
*     2541  3807: contig of 1267 bp in length
*     3808  3907: gap of 100 bp

            Sequencing vector: pUC18; L08752
            Chemistry: Dye-terminator Big Dye; 100%
            *Consensus quality: 184639 at least Q20
            *Consensus quality: 178829 at least Q30
            *Consensus quality: 168661 at least Q40
            Estimated insert size: 198699 - sum-of-contigs
            **Estimated insert size: agarose-FP - N/A
            Quality coverage: agarose-FP - N/A
            Quality coverage: 4.8 x in Q20 bases; sum-of-contigs estimation
            ----
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 34 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *   1: contig of 12682 bp in length

            Estimated insert size: 218000; agarose-fp estimation
            Estimated insert size: 238924; sum-of-contigs estimation
            Quality coverage: 10.77 in Q20 bases; agarose-fp estimation
            Quality coverage: 9.83 in Q20 bases; sum-of-contigs estimation
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 15 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction: Helix Research Institute (HRI) (supported by Japan
            Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
            HRI, and Biotechnology Center, National Institute of Technology and
            Evaluation; clone selection for full insert sequencing: RAB and
            HRI.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

          Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE  1 (bases 1 to 148598)
AUTHORS   Wray,P.
TITLE     Direct Submission
JOURNAL   Submitted (22-NOV-2001) Wellcome Trust Sanger Institute, Hinxton,
          Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT   On Nov 25, 2001 this sequence version replaced gi:715748.
          During sequence assembly data is compared from overlapping clones.
          Where differences are found these are annotated as variations
          together with a note of the overlapping clone name. Note that the
          variation annotation may not be found in the sequence submission
          corresponding to the overlapping clone, as we submit sequences with
          only a small overlap as described above.
          The following abbreviations are used to associate primary accession
          numbers given in the feature table with their source databases:
          Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
          on the WORMPEP database can be found at
          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
          was generated from part of bacterial clone contigs of human
          chromosome X, constructed by the Sanger Centre Chromosome X Mapping
          Group. Further information can be found at
          http://www.sanger.ac.uk/HGP/ChrX
          This sequence is the entire insert of clone RP11-51C14 This
          sequence was finished as follows unless otherwise noted: all
          regions were either double-stranded or sequenced with an alternate
          chemistry or covered by high quality data (i.e. phred quality >=
          30); an attempt was made to resolve all sequencing problems, such
          as compressions and repeats; all regions were covered by at least
          one plasmid subclone or more than one M13 subclone; and the
          assembly was confirmed by restriction digest. RP11-51C14 is from
          the library RPCI-11.1 constructed by the group of Pieter de Jong.
          For further details see
          http://www.chori.org/bacpac/home.htm
          VECTOR: pBACe3.6.

TITLE       Direct Submission
JOURNAL     Submitted (15-SEP-2001) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
            On Dec 20, 2001 this sequence version replaced gi:15624323.
COMMENT     Center: Baylor College of Medicine
            Genome Center
            Center code: BCM
            Web site: http://www.hgsc.bcm.tmc.edu/
            Contact: hgsc-help@bcm.tmc.edu
            ----------------------- Project Information
            Center project name: GATG
            Center clone name: CH230-4G21
            ----------------------- Summary Statistics
            Assembly program: Phrap; version 0.990329First call to
            findPhrapList
            Consensus quality: 151007 bases at least Q40
            Consensus quality: 158658 bases at least Q30
            Consensus quality: 164378 bases at least Q20
            Estimated Insert size: 158161; sum-of-contigs estimation
            Quality coverage: 0x in Q20 bases; agarose-fp estimation
            Quality coverage: 2.4x in Q20 bases; sum-of-contigs estimation
          * NOTE: Estimated insert size may differ from sequence length
          * (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 61 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *      1   6678: contig of 6678 bp in length
          *   6679   6778: gap of unknown length
          *   6779  13669: contig of 6891 bp in length
          *  13670  13769: gap of unknown length
          *  13770  21847: contig of 8078 bp in length
          *  21848  21947: gap of unknown length
          *  21948  29457: contig of 7510 bp in length
          *  29458  29557: gap of unknown length
          *  29558  34848: contig of 5291 bp in length

COMMENT   On Jan 30, 1999 this sequence version replaced gi:3763910.
            INFORMATION: http://gc.bcm.tmc.edu:8008/home.html or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
            STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
            Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
            Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.

----------

* NOTE: This record contains 251 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

RESULT 15
RATMTAP/c
LOCUS       RATMTAP     10120 bp    mRNA    linear    ROD 26-FEB-1997
DEFINITION  Rattus norvegicus microtubule-associated protein 1A MAP1A (Mtap-1)
            mRNA, complete cds.
ACCESSION   M83196
VERSION     M83196.1  GI:205537
KEYWORDS    microtubule-associated protein 1A.
SOURCE      Norway rat.
  ORGANISM  Rattus norvegicus
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae;
            Rattus.
REFERENCE   1  (bases 1 to 10120)
  AUTHORS   Langkopf,A., Hammarback,J.A., Muller,R., Vallee,R.B. and
            Garner,C.C.
  TITLE     Microtubule-associated proteins 1A and LC2. Two proteins encoded in
            one messenger RNA
  JOURNAL   J. Biol. Chem. 267 (23), 16561-16566 (1992)

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (23-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 8, 2000 this sequence version replaced gi:10715832.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 13, constructed by the Sanger Centre Chromosome 13
            Mapping Group. Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr13
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-140I19 It may be shorter because we sequence overlapping
            sections only once, except for a 100 base overlap.
            The true right end of clone RP11-140I19 is at 112929 in this
            sequence. The true right end of clone RP11-477B16 is at 100 in this
            sequence. This sequence was finished as follows unless otherwise
            noted: all regions were either double-stranded or sequenced with an
            alternate chemistry or covered by high quality data (i.e., phred
            quality >= 30); an attempt was made to resolve all sequencing
            problems, such as compressions and repeats; all regions were
            covered by at least one plasmid subclone or more than one M13
            subclone; and the assembly was confirmed by restriction digest.
            RP11-140I19 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction: Helix Research Institute (HRI) (supported by Japan
            Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
            HRI, and Biotechnology Center, National Institute of Technology and
            Evaluation; clone selection for full insert sequencing: RAB and
            HRI.

REFERENCE   1  (bases 1 to 180538)
  AUTHORS   Blakey,S.
  TITLE     Direct Submission
  JOURNAL   Submitted (01-NOV-2000) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Oct 26, 2000 this sequence version replaced gi:9799955.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence has been finished according to sequence map criteria
            as follows. An attempt is made to resolve all sequencing problems,
            such as compressions and repeats, but not necessarily within known
            annotated human repeat sequence elements (e.g. Alu). Where the
            sequence is ambiguous, there is an annotation using the 'unsure'
            feature key.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 13, constructed by the Sanger Centre Chromosome 13
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr13
            RP11-477B16 is from the library RPCI-11 constructed at the
            Roswell Park Cancer Institute by the group of Pieter de Jong. For
            further details see http://bacpac.med.buffalo.edu/
            VECTOR: pBACe3.6
            This sequence is the entire insert of clone RP11-477B16 The true
            left end of clone RP11-140119 is at 124009 in this sequence. The
            true right end of clone RP11-171014 is at 68026 in this sequence.

            Center project name: L5860
            Center clone name: 338_H_7

            NOTE: This record contains 156 individual
*   sequencing reads that have not been assembled into
*   contigs. Runs of N are used to separate the reads
*   and the order in which they appear is completely
*   arbitrary. Low-pass sequence sampling is useful for
*   identifying clones that may be gene-rich and allows
*   overlap relationships among clones to be deduced.
*   However, it should not be assumed that this clone
*   will be sequenced to completion. In the event that
*   the record is updated, the accession number will
*   be preserved.
*
*   1   793: contig of 793 bp in length
*   794   893: gap of   100 bp

COMMENT   -------------- Genome Center
            Center: Washington University Genome Sequencing Center
            Center code: WUGSC
            Web site: http://genome.wustl.edu/gsc
            Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
            Center project name: H_NH0312103

            NOTICE: This sequence may not represent the entire insert of this
            clone. It may be shorter because we only sequence overlapping this
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An Improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at the Roswell Park Cancer Institute
            (http://bacpac.med.buffalo.edu)
            VECTOR: pBACe3.6
            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-332A19; the clone sequenced
            to the right is RP11-11K6. Actual start of this clone is at base
            position 1 of RP11-11K6. Actual end is at base position 214269 of
            RP11-31213.

            There are polymorphic base pair differences in the overlap between
            the clone RP11-31213 and RP11-11K6.

　AUTHORS　　　Brown,A.
　TITLE　　　　 Direct Submission
　JOURNAL　　　Submitted (15-NOV-2001) Wellcome Trust Sanger Institute, Hinxton,
　　　　　　　 Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
　　　　　　　 humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT　　　　On Nov 16, 2001 this sequence version replaced gi:16605669.
　　　　　　　 During sequence assembly data is compared from overlapping clones.
　　　　　　　 Where differences are found these are annotated as variations
　　　　　　　 together with a note of the overlapping clone name. Note that the
　　　　　　　 variation annotation may not be found in the sequence submission
　　　　　　　 corresponding to the overlapping clone, as we submit sequences with
　　　　　　　 only a small overlap as described above.
　　　　　　　 This sequence was finished as follows unless otherwise noted: all
　　　　　　　 regions were either double-stranded or sequenced with an alternate
　　　　　　　 chemistry or covered by high quality data (i.e., phred quality >=
　　　　　　　 30); an attempt was made to resolve all sequencing problems, such
　　　　　　　 as compressions and repeats; all regions were covered by at least
　　　　　　　 one plasmid subclone or more than one M13 subclone; and the
　　　　　　　 assembly was confirmed by restriction digest. The following
　　　　　　　 abbreviations are used to associate primary accession numbers given
　　　　　　　 in the feature table with their source databases: Em:, EMBL; Sw:,
　　　　　　　 SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
　　　　　　　 database can be found at
　　　　　　　 http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
　　　　　　　 was generated from part of bacterial clone contigs of human
　　　　　　　 chromosome 10, constructed by the Sanger Centre Chromosome 10
　　　　　　　 Mapping Group.　Further information can be found at
　　　　　　　 http://www.sanger.ac.uk/HGP/Chr10
　　　　　　　 RP11-96C4 is from the library RPCI-11.1 constructed by the group of
　　　　　　　 Pieter de Jong. For further details see
　　　　　　　 http://www.chori.org/bacpac/home.htm
　　　　　　　 VECTOR: pBACe3.6
　　　　　　　 IMPORTANT: This sequence is not the entire insert of clone
　　　　　　　 RP11-96C4 It may be shorter because we sequence overlapping
　　　　　　　 sections only once, except for a short overlap.
　　　　　　　 The true left end of clone RP11-384P3 is at 1 in this sequence.
　　　　　　　 The true left end of clone RP11-96C4 is at 170178 in this sequence.
　　　　　　　 The true right end of clone RP11-388P9 is at 29608 in this
　　　　　　　 sequence.

            --------------
            NOTE: This is a 'working draft' sequence. It currently consists of
            18 contigs. The true order of the pieces is not known and their
            order in this sequence record is arbitrary. Gaps between the
            contigs are represented as runs of N, but the exact sizes of the gaps
            are unknown. This record will be updated with the finished sequence
            as soon as it is available and the accession number will be
            preserved.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

            Summary Statistics
            Consensus quality: 35124 bases at least Q40
            Consensus quality: 35398 bases at least Q30
            Consensus quality: 35534 bases at least Q20
            Estimated insert size: 32650; agarose-fp estimation
            Estimated insert size: 35748; sum-of-contigs estimation
            Quality coverage: 10.55 in Q20 bases; agarose-fp estimation
            Quality coverage: 9.64 in Q20 bases; sum-of-contigs estimation.
            NOTE: This is a 'working draft' sequence. It currently
            consists of 3 contigs. Gaps between the contigs
            are represented as runs of N. The order of the pieces
            is believed to be correct as given, however the sizes
            of the gaps between them are based on estimates that have
            provided by the submitter.
            This sequence will be replaced
            by the finished sequence as soon as it is available and
            the accession number will be preserved.
             1   18613: contig of 18613 bp in length
            18614 18713: gap of unknown length
            18714 19277: contig of 564 bp in length
            19278 19377: gap of unknown length
            19378 35848: contig of 16471 bp in length.

            Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA
COMMENT   On Sep 19, 2001 this sequence version replaced gi:13786419.
            Sequence Quality Assessment:
            This entry has been annotated with sequence quality
            estimates computed by the Phrap assembly program.
            All manually edited bases have been reduced to quality zero.
            Quality levels above 40 are expected to have less than
            1 error in 10,000 bp.
            Base-by-base quality values are not generally visible from the
            GenBank flat file format but are available as part
            of this entry's ASN.1 file.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *

              Web site: http://www-seq.wi.mit.edu
              Contact: sequence_submissions@genome.wi.mit.edu
            --------------
              Project Information
              Center project name: Li2650
              Center clone name: 845_D_20
            --------------
            * NOTE: This record contains 63 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            * ----------------
            *      1    704: contig of 704 bp in length
            *    705    804: gap of 100 bp
            *    805   1545: contig of 741 bp in length
            *   1546   1645: gap of 100 bp

            NOTE: This is a 'working draft' sequence. It currently
            consists of 47 contigs. The true order of the pieces
            is not known and their order in this sequence record is
            arbitrary. Gaps between the contigs are represented as
            runs of N, but the exact sizes of the gaps are unknown.
            This record will be updated with the finished sequence
            as soon as it is available and the accession number will
            be preserved.

             of Molecular and Human Genetics, Baylor College of Medicine, One
             Baylor Plaza, Houston, TX 77030, USA
COMMENT   On Dec 20, 2001 this sequence version replaced gi:15627781.

             --------------- Genome Center
               Center: Baylor College of Medicine
               Center code: BCM
               Web site: http://www.hgsc.bcm.tmc.edu/
               Contact: hgsc-help@bcm.tmc.edu
             ---------- Project Information
               Center project name: GEOC
               Center clone name: CH230-11D21
             --------------- Summary Statistics
             Assembly program: Phrap; version 0.990329First call to
             findPhraplist
               Consensus quality: 39129 bases at least Q40
               Consensus quality: 47892 bases at least Q30
               Consensus quality: 54035 bases at least Q20
               Estimated insert size: 23598; sum-of-contigs estimation
               Quality coverage: 0x in Q20 bases; agarose-fp estimation
               Quality coverage: 0.2x in Q20 bases; sum-of-contigs estimation
             ----
             * NOTE: Estimated insert size may differ from sequence length
             *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
             * NOTE: This is a 'working draft' sequence. It currently
             * consists of 44 contigs. The true order of the pieces
             * is not known and their order in this sequence record is
             * arbitrary. Gaps between the contigs are represented as
             * runs of N, but the exact sizes of the gaps are unknown.
             * This record will be updated with the finished sequence
             * as soon as it is available and the accession number will
             * be preserved.
             *
             *   1 2381:   contig of 2381 bp in length
             * 2382 2481:   gap of unknown length
             * 2482 3972:   contig of 1491 bp in length
             * 3973 4072:   gap of unknown length
             * 4073 5565:   contig of 1493 bp in length
             * 5566 5665:   gap of unknown length
             * 5666 7271:   contig of 1606 bp in length

COMMENT     On Aug 1, 2001 this sequence version replaced gi:13786407.
            Sequence Quality Assessment:
            This entry has been annotated with sequence quality
            estimates computed by the Phrap assembly program.
            All manually edited bases have been reduced to quality zero.
            Quality levels above 40 are expected to have less than
            1 error in 10,000 bp.
            Base-by-base quality values are not generally visible from the
            GenBank flat file format but are available as part
            of this entry's ASN.1 file.
            ----------

            ----------
            NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submitter.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *

            - Web : www.genoscope.cns.fr)
COMMENT     The cDNA library to be analyzed within the framework of this
            project was created using a Botrytis cinerea strain which was grown
            under conditions of nitrogen deprivation, which is the normal
            situation for B. cinerea during its development on its host plant.
            The library was produced in an oriented direction, in the pBSII
            vector.

JOURNAL   Direct Submission
TITLE   Submitted (09-JAN-2002) Human Genome Sequencing Center, Department
           of Molecular and Human Genetics, Baylor College of Medicine, One
           Baylor Plaza, Houston, TX 77030, USA

COMMENT   ----------- Genome Center
           Center: Baylor College of Medicine
           Center code: BCM
           Web site: http://www.hgsc.bcm.tmc.edu/
           Contact: hgsc-help@bcm.tmc.edu
           ----------- Project Information
           Center project name: GNMH
           Center clone name: CH230-52J8
           ----------- Summary Statistics
           Assembly program: Phrap; version 0.990329First call to
           findPhrapList
           Consensus quality: 107670 bases at least Q40
           Consensus quality: 117102 bases at least Q30
           Consensus quality: 123580 bases at least Q20
           Estimated insert size: 98010; sum-of-contigs estimation
           Quality coverage: 0x in Q20 bases; agarose-fp estimation
           Quality coverage: 1.3x in Q20 bases; sum-of-contigs estimation
           ----
       * NOTE: Estimated insert size may differ from sequence length
       * (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
       * NOTE: This is a 'working draft' sequence. It currently
       * consists of 73 contigs.The true order of the pieces
       * is not known and their order in this sequence record is
       * arbitrary. Gaps between the contigs are represented as
       * runs of N, but the exact sizes of the gaps are unknown.
       * This record will be updated with the finished sequence
       * as soon as it is available and the accession number will
       * be preserved.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

            gi:4589938.
            --------------    Genome Center
                    Center: Baylor College of Medicine
                    Center code: BCM
                    Web site: http://www.hgsc.bcm.tmc.edu/
                    Contact: hgsc-help@bcm.tmc.edu
            --------------    Project Information
                    Center project name: J-31
                    Center clone name: RP4-761J14, RP11-433J6
            --------------    Summary Statistics
                    Sequencing vector: M13; L08821
                    Chemistry: Dye-primer BodyJ: 92% of reads
                    Chemistry: Dye-terminator Big Dye: 7% of reads
                    Assembly program: Phrap; version 0.990329
                    Consensus quality: 214565 bases at least Q40
                    Consensus quality: 230283 bases at least Q30
                    Consensus quality: 240000 bases at least Q20
                    Estimated insert size: 29807; agarose-fp estimation
                    Quality coverage: 0x in Q20 bases; agarose-fp estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *    (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            *    consists of 42 contigs. The true order of the pieces
            *    is not known and their order in this sequence record is
            *    arbitrary. Gaps between the contigs are represented as
            *    runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            *    as soon as it is available and the accession number will
            *    be preserved.
            *        1    27068: contig of 27068 bp in length
            *    27069    27168: gap of unknown length
            *    27169    51197: contig of 24029 bp in length
            *    51198    51297: gap of unknown length
            *    51298    89527: contig of 38230 bp in length
            *    89528    89627: gap of unknown length
            *    89628   108061: contig of 18434 bp in length

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

COMMENT         Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
                Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
                sequenced by BMFZ (Biomedical Research Center at the Charite,
                Berlin/Germany) within the cDNA sequencing consortium of the German
                Genome Project.
                This clone (DKFZp434C196) is available at the RZPD in Berlin.
                Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
                Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
                information about the clone and the sequencing project is available
                at http://www.mips.biochem.mpg.de/proj/cDNA/.

            Center project name: bA341D18
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing program: plasmid; L08752; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Consensus quality: 179028 bases at least Q40
            Consensus quality: 181067 bases at least Q30
            Consensus quality: 182219 bases at least Q20
            Insert size: 183390; sum-of-contigs
            Insert size: 192611; 2.8% error; agarose-fp
            Quality coverage: 4.33x in Q20 bases; sum-of-contigs Quality
            coverage: 4.20x in Q20 bases; agarose-fp
* NOTE: This is a 'working draft' sequence. It currently
* consists of 13 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*          1   36485: contig of 36485 bp in length

COMMENT     This is a complete sequence of the insert of KB1592A4 clone. The
            distal adjacent clone is KB876E2 (Acc.#AP000551) with 1196-bp
            overlapping.

            --------------- Project Information
            Center project name: L2604
            Center clone name: 278_E_23
            --------------- Summary Statistics
            Sequencing vector: M13; M77815; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Assembly program: Phrap; version 0.960731
            Consensus quality: 144663 bases at least Q40
            Consensus quality: 153318 bases at least Q30
            Consensus quality: 156484 bases at least Q20
            Insert size: 173000; agarose-fp
            Insert size: 158350; sum-of-contigs
            Quality coverage: 5.4 in Q20 bases; agarose-fp
            Quality coverage: 5.9 in Q20 bases; sum-of-contigs
            ----
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *   1   1729: contig of 1729 bp in length
            *   1730   1829: gap of 100 bp
            *   1830   3716: contig of 1887 bp in length
